

JSC site presentation 7th EasyBuild User Meeting

January 28, 2022 | Sebastian Achilles | Jülich Supercomputing Centre

JÜLICH
SUPERCOMPUTING
CENTRE

JUWELS Cluster + Booster

JUWELS Cluster

- 2271 standard, 240 large-mem and 56 GPU nodes
- 2× Intel Xeon Platinum 8168, 2× 24 cores, 2.7 GHz
- 96 GB (large mem and GPU 192 GB)
- InfiniBand EDR
- 56 nodes with 4× NVIDIA V100

January 28, 2022

JUWELS Booster

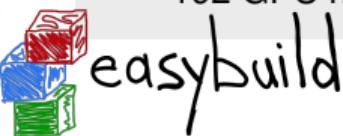

- 936 nodes
- 2× AMD EPYC Rome 7402, 2× 24 cores, 2.7 GHz
- 512 GB DDR4
- 4× NVIDIA A100
- 4× InfiniBand HDR200

JURECA-DC

JURECA-DC

- 768 nodes
- 2× AMD EPYC Rome 7742, 2× 64 cores, 2.25 GHz
- 512 GB DDR4 (large mem 1024 GB)
- 2× InfiniBand HDR200
- 96 large-memory nodes
- 192 GPU nodes with 4× NVIDIA A100

January 28, 2022

JURECA-Booster

- 1640 nodes
- 1× Intel Xeon Phi 7250-F, 1× 68 cores, 1.4 GHz
- 96 GiB + 16 GiB MCDRAM high-bandwidth memory
- Intel Omni-Path Architecture

Slide 2/16

JUSUF, HDFML

JUSUF

- 205 nodes
- 2× AMD EPYC Rome 7742, 2× 64 cores, 2.25 GHz
- 256 GB DDR4
- InfiniBand HDR100
- 61 nodes with 1× NVIDIA V100

HDFML

- 16 nodes
- 2× Intel Xeon Gold 6126, 2× 12 cores, 2.60 GHz
- 192 GB DDR4
- 4× NVIDIA V100
- InfiniBand HDR100

DEEP-EST prototype

- 50 Cluster nodes: 2 x Intel Xeon Gold 6146, 192 GB
- 75 Extreme Scale Booster nodes: Intel Xeon Silver 4215, 48 GB, 1x NVIDIA V100
- 16 Data Analytics Module nodes: 2x Intel Xeon Platinum 8260M, 384 GB, 1x NVIDIA V100

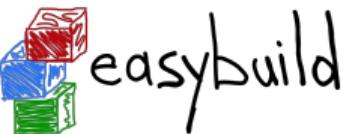

Other systems

Other Prototypes

- ARM Cluster
- ...

JSC Clouds

- Jupyter-JSC
- virtual Test cluster(s)

JSC Software Team

- Software Core Team
 - 5 people
 - Responsible for core installation (GCCcore, compiler, MPI, Math)
 - Responsible for reviewing and merging PR into the JSC easybuild repository
- Software Group
 - Group of 36 people
 - Each module has one responsible person which is applications/packages expert
 - Responsible for installation with EasyBuild (with ACLs), testing and validation as well as user questions

What is new at JSC?

- Beginning with Stages/2022 increase overlap with upstream
- Allow users to install software with EasyBuild on-top of the available modules with UserInstallations

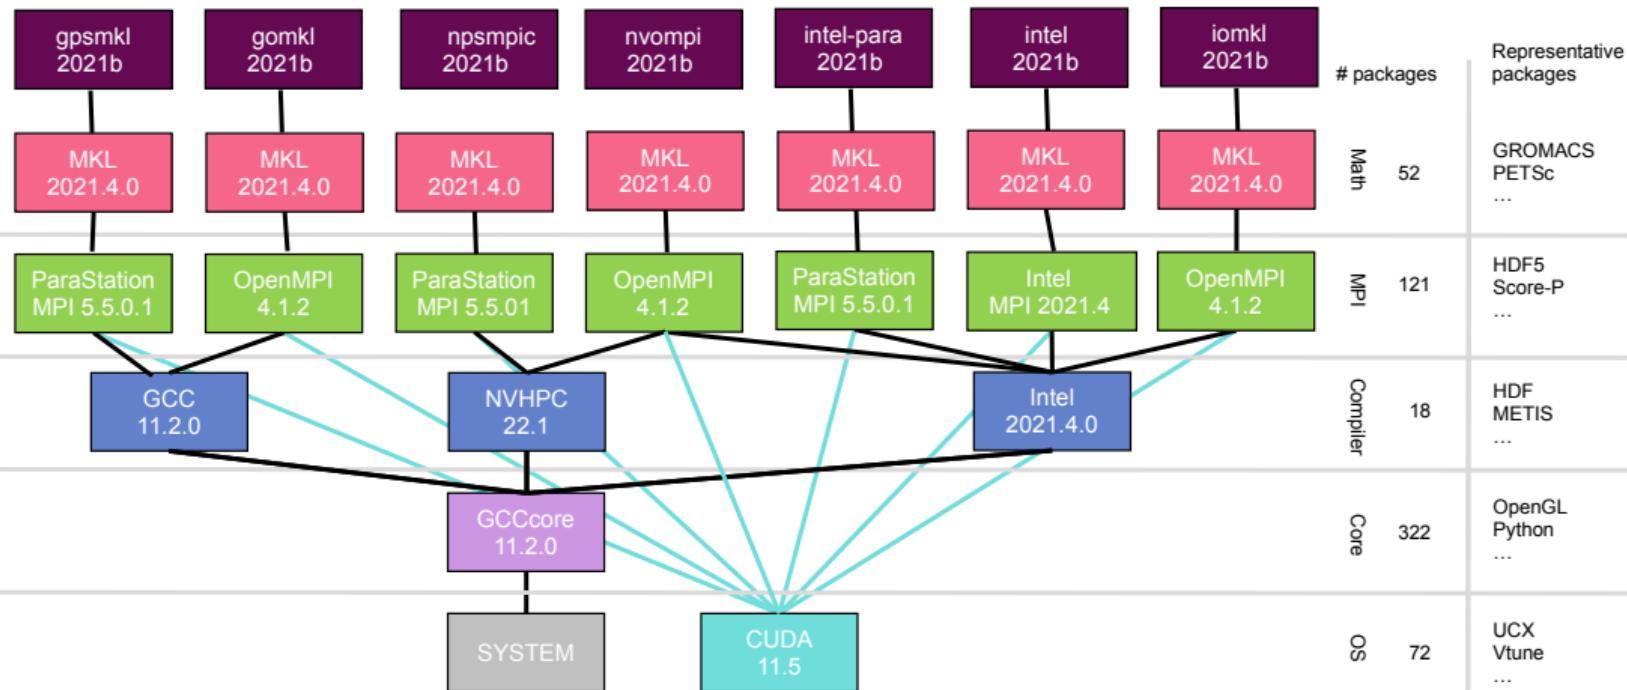

Stage 2022

- Based on 2021b toolchain family
- Custom toolchains
- Reduced number of custom EasyBlocks (18 compared to 25 in 2021 stage)
- Extended hook

Stages 2022 toolchains

UserInstallations

Install packages in Production stage:

```
ml Stages/2022  
ml Developers  
eb packages-1.2.3.eb
```

Install packages in User space:

```
ml Stages/2022  
ml UserInstallations  
eb packages-1.2.3.eb
```

- currently used for testing and development
- Goal: Allow users to install easyconfigs from upstream (`--try--*`)

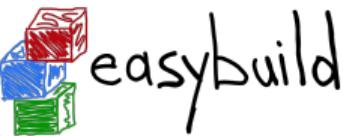

Usage of the hook in the JSC repo

- Goal: increase overlap with upstream
- at the same time allow modification in JSC repo as well as allow to use easyconfigs from upstream (e.g. for users)
- Solution:
 - JSC hook can tweak dependencies, e.g. when you want to install an easyconfig from upstream
 - JSC CI is strict and only allows dependencies from JSC repo to maintain readability
- Some dependencies the hook currently tweaks:
 - UCX v1.12.0
 - Mesa, glu, glew → OpenGL
 - CUDA v11.5
 - Boost v1.78.0

Expanding the EB's shared test infrastructure

Virtual Cluster at JSC

Current situation

- One test cluster `generoso` based on Intel
- Other architectures or OS need to be manually tested by Maintainers

The screenshot shows two GitHub comments. The first comment is from **boegelbot** on Aug 12, 2021, indicating a successful build for Intel(R) Xeon(R) CPU E5-2667 v3 @ 3.20GHz (haswell), Python 3.6.8. The second comment is from **SebastianAchilles** on Aug 12, 2021, indicating a successful build for AMD EPYC 7742 64-Core Processor, Python 3.6.8.

boegelbot commented on Aug 12, 2021

Test report by [@boegelbot](#)
SUCCESS
Build succeeded for 2 out of 2 (2 easyconfigs in total)
generoso-c1-s-4 - Linux centos linux 8.2.2004, x86_64, Intel(R) Xeon(R) CPU E5-2667 v3 @ 3.20GHz (haswell), Python 3.6.8
See <https://gist.github.com/2ea0f46ace78ba2c524efba37b12171e> for a full test report.

SebastianAchilles commented on Aug 12, 2021

Test report by [@SebastianAchilles](#)
SUCCESS
Build succeeded for 2 out of 2 (2 easyconfigs in total)
jrlogin11.jureca - Linux centos linux 8.3.2011, x86_64, AMD EPYC 7742 64-Core Processor, Python 3.6.8
See <https://gist.github.com/989cac6d14d0a7ffe13abea31ce510> for a full test report.

Virtual Cluster with Magic Castle

- Virtual Cluster with Magic Castle: https://github.com/ComputeCanada/magic_castle
 - JUSUF-Cloud: OpenStack, AMD EPYC 7742, NVIDIA V100
 - boebelbot listening to submit test-reports

```
[zen2 ~] zen2 -- Konsole
File Edit View Bookmarks Settings Help
[achilles@zen2:~]$ ssh zen2
Authenticated to zen2.

Welcome to the EasyBuild shared test infrastructure, hosted on JUSUF by JSC.

To get started, run "source /project/def-maintainers/maintainers/setup_eb_env.sh".

*** This is still a work-in-progress, contact @SebastianAchilles in case of problems or questions! ***

Activate the web console with: systemctl enable --now cockpit.socket

Last login: Thu Jan 27 09:49:13 2022 from
[achilles@zen2:~]$
```

Now boegelbot can also run on AMD zen2

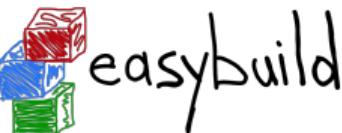

The screenshot shows a GitHub pull request interface. At the top, a user named 'boegel' comments: '@boegelbot please test @ jsc-zen2'. Below this, the bot 'boegelbot' replies: 'Request for testing this PR well received on jsf1.int.jusuf.sebastian.cluster'. It provides the command used: 'PR test command' EB_PR=14733 EB_ARGS= /opt/software/slurm/bin/sbatch --job-name test_PR_14733 --ntasks=8 -/boegelbot/eb_from_pr_upload_jsc-zen2.sh 'executed!'. It lists two bullet points: 'exit code: 0' and 'output:'. Under 'output:', it says 'Submitted batch job 1534'. It also mentions 'Test results coming soon (I hope)...'. A 'Details' link is present. In the final comment, the bot reports: 'Test report by @boegelbot', 'SUCCESS', 'Build succeeded for 1 out of 1 (1 easyconfigs in total)', 'jsfc01.int.jusuf.sebastian.cluster - Linux rocky linux 8.4, x86_64, AMD EPYC 7742 64-Core Processor (zen2), Python 3.6.8', and provides a link to a GitHub gist: <https://gist.github.com/3631a71f59f60e698a4e99401624aed8> for a full test report.

Hardware for tests reports with boegelbot

| CPU arch | system name | available |
|---------------|-------------|-----------|
| Intel Haswell | generoso | ✓ |
| AMD Zen2 | jsc-zen2 | ✓ |

| accelerators | system name | available |
|--------------|-------------|-----------|
| NVIDIA V100 | jsc-zen2 | (✓) |

Hardware for tests reports with boegelbot

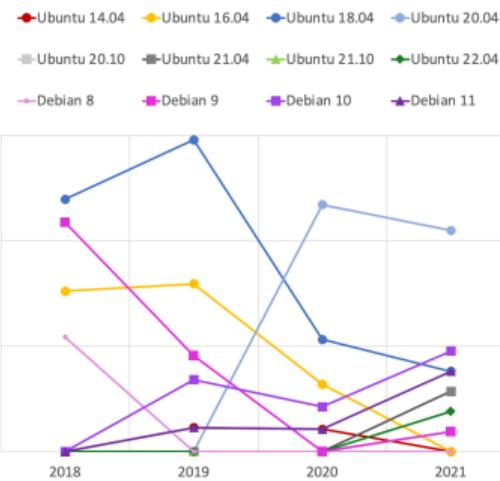

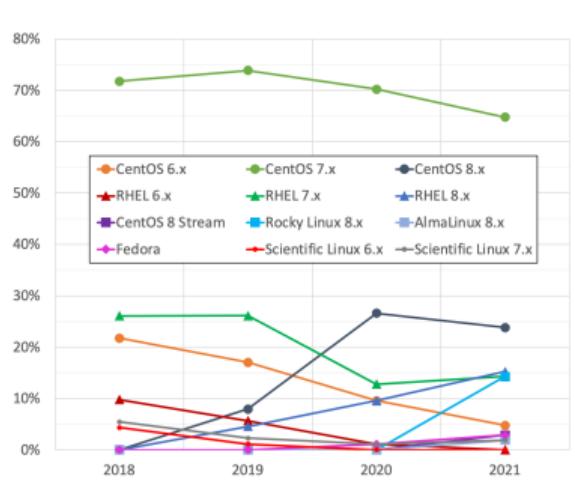

| CPU arch | system name | available |
|---------------|-------------|-----------|
| Intel Haswell | generoso | ✓ |
| Intel Skylake | | ✗ |
| AMD Zen2 | jsc-zen2 | ✓ |
| AMD Zen3 | | ✗ |
| ARM | | ✗ |
| RISC-V | | ✗ |

| accelerators | system name | available |
|-----------------|-------------|-----------|
| NVIDIA V100 | jsc-zen2 | (✓) |
| NVIDIA A100 | | ✗ |
| AMD MI100/MI200 | | ✗ |
| Intel Arc | | ✗ |

Testing different operating systems in container?

- Test reports by boegelbot currently done on RockyLinux
 - However EasyBuild is used on many operating systems
- ⇒ Let boegelbot test different OS in containers

Thank you!
